

dalla corte dc one

dc system.

dc one.

The dc one completes the Dalla Corte philosophy: aiming for the easiest solution able to offer the best possible result in the cup and able to improve the job of the barista. As the grinder setting is the first step the barista has to take to obtain a perfect extraction, the dc one has been designed to ensure quality cup by cup, thanks to its unique features specially suited for the espresso preparation: The simple and intuitive functioning, the flat bars expressly designed to obtain the perfect “cut” of the bean, the automatic recognition between single and double shot, the display that facilitates the definition of the settings and the cooling system that does not allow any heating of the ground coffee are the basic features that guarantee a perfect grinding. The barista will also appreciate the competition mode: a setting that makes the grinding adjustments fast and immediate and allow the barista to customize the quantity of ground coffee.

dimensions (w x h x d)	(mm)	235x570x300
grinding capacity	(g/sec)	approx. 4
hopper capacity	(g)	1500
power consumption	(w)	500
connected load		230/240 V 1 Ph, 115 V 1 Ph - 50/60 Hz
rotations/min.	(rpm)	1350 (200V - 50Hz)
grinding disc ø	(mm)	64
weight	(kg)	12
GAS (granulometry adjustemt system)		included
BCS (burr control system)		included
